

SALESFORCE CPQ ENVIRONMENT ASSESSMENT REPORT

Current State Configuration & Usage Analysis

Field	Value
Client Name	Salesforce Demo
Salesforce Org ID	00D3x000001AjYCEA0
Environment	Production
Assessment Date	2026-05-04
Assessment Period	Feb 3, 2026 – May 4, 2026 (90 Days)
CPQ Package Version	232.2.0
Adv. Approvals Version	sbaa v232.2.0 (Active)
Document Version	1.0
Report Generated By	RevBrain CPQ Assessment Tool v1.0
Classification	Confidential

Generated by RevBrain CPQ Assessment Tool

1. Scope & Methodology

Audience: This report is designed for review of current-state CPQ complexity prior to planning.

1.1 Assessment Scope

This report provides a current-state assessment of the Salesforce CPQ environment. The following areas were assessed:

- CPQ configuration objects (products, bundles, options, constraints, attributes)
- Pricing rules, discount schedules, and custom scripts
- CPQ package settings and plugin configuration
- Quote templates and document generation
- Advanced approval rules and workflows
- 90-day transactional usage patterns and trends
- User behavior and adoption metrics
- Discount and override patterns
- Data quality and field completeness
- Technical debt indicators (dormant configs, duplicate rules)
- Custom code: Apex, triggers, flows referencing CPQ objects
- Complexity scoring across 5 weighted dimensions
- Quote lifecycle and integration touchpoints

1.2 Methodology

Metadata Extraction: CPQ configuration metadata extracted via Salesforce REST, Tooling, and Metadata APIs.

Usage & Behavior Analysis: SOQL queries extract 90-day transactional data including quotes, quote lines, orders, and user activity.

Data Quality Assessment: Automated analysis of field completeness, orphaned records, and duplicate detection.

Custom Code Scan: Identification of Apex classes, triggers, and flows referencing SBQQ objects via namespace scan.

Complexity Scoring: Fixed weighted model (see Section 2.3) normalized against benchmark ranges.

⚠ **Low activity detected in assessment window (23 quotes all-time, 0 in 90-day window, 6 active users). Some metrics may not be statistically meaningful.**

1.3 Org / Environment Summary

Field	Value
Organization Name	Salesforce Demo
Salesforce Org ID	00D3x000001AjYCEA0
Environment Type	Production
Org Edition	Enterprise
Time Zone	America/Los_Angeles
Multi-Currency	AUD, GBP, EUR, NZD, USD
CPQ Package Version	232.2.0

Field	Value
Adv. Approvals Version	sbaa v232.2.0 (Active)
Assessment Period	Feb 3, 2026 – May 4, 2026 (90 Days)

1.4 Data Confidence Levels

Level	Label	Definition
★★★	Confirmed	Directly extracted from Salesforce metadata or SOQL query.
★★	Estimated	Derived from available metadata with reasonable inference.
★	Partial	Based on incomplete extraction or sampling.
—	Not extracted	Extraction not attempted or collector did not produce results.

2. Executive Summary

Metric	Value
Active Products	176
Active Rules (Price + Product)	20 + 37
Quotes (All-Time)	23
Quotes (90-Day)	0
Active Users (90d)	6
Apex Classes (CPQ)	109
CPQ-Related Flows	13

Overall Complexity

Score (100-pt)	Score (1–10)	Tier
26/100	2.6/10	Moderate

1–10 score is a directional summary of the 100-point composite; both are shown for transparency.

Dimension	Score	Tier
Configuration Depth	32/100	Moderate
Pricing Logic	36/100	Moderate
Customization Level	23/100	Low
Data Volume & Usage	22/100	Low
Technical Debt	10/100	Low

Top Hotspot	Severity
Quote Pricing Engine	Critical
DocuSign Document Chain	High
Custom Code Dependencies	High
Bundle & Option Configuration	High
Custom Action Buttons	High

2.1 Key Findings

#	Finding	Detail	Confidence
1	Custom Quote Calculator Plugin (QCP) active	5 custom script(s) detected via SBQQ__CustomScript__c — indicating JavaScript-based pricing logic extends standard CPQ calculation. Plugin slot registration not directly confirmed via Package Settings. 4 additional custom script(s) detected — see Section 9 for full inventory.	Estimated
2	20 active price rules and 37 active product rules detected	20 price rules and 37 product rules actively configured — indicating significant business logic encoded in CPQ rule configuration.	Confirmed
3	345 CPQ licenses provisioned with 6 active users	345 CPQ licenses provisioned with 6 active users and 23 quotes all-time (0 in the 90-day window) — indicating very low adoption. License utilization and user onboarding should be evaluated. Note: low transaction volume may underrepresent operational complexity signals derived from quoting patterns and discount behavior.	Confirmed
4	13 flows reference CPQ objects	13 flows reference CPQ objects — indicating non-standard automation patterns. Standard CPQ automation uses Price Rules and Product Rules; flow-based CPQ logic may indicate custom workarounds requiring review.	Confirmed
5	Active integrations detected beyond core CPQ	Multiple active integrations detected beyond core CPQ (billing, e-signature, tax calculation) — adding migration complexity by extending the quote-to-cash footprint beyond core pricing and product configuration.	Confirmed
6	Multi-currency enabled (AUD, GBP, EUR, NZD, USD)	The org uses multi-currency pricing — adding complexity to field mapping, exchange rate handling, and multi-currency price book structures.	Confirmed
7	109 Apex classes reference CPQ objects	109 Apex classes reference CPQ objects — indicating substantial custom code dependency beyond standard CPQ configuration.	Confirmed

2.2 Complexity Scores

Overall Complexity	26/100	
Configuration Depth	32/100	
Pricing Logic	36/100	
Customization Level	23/100	
Data Volume & Usage	22/100	
Technical Debt	10/100	

Scores are directional indicators of relative complexity, not absolute measures.

2.3 Scoring Methodology

Dimension	Weight	Score	Tier	Drivers
Configuration Depth	25%	32/100	Moderate	Product catalog size, bundle nesting, option constraints, config attributes Score reflects 179 total products (176 active), 19 bundle-capable

Dimension	Weight	Score	Tier	Drivers
				products, and 475 product options. Moderate configuration surface area.
Pricing Logic	25%	36/100	Moderate	Price rules, discount schedules, custom scripts (QCP), contracted pricing Score reflects 28 price rules, 22 discount schedules, and 5 custom script(s) (QCP). Custom scripts detected — JavaScript-based pricing logic significantly elevates complexity.
Customization Level	20%	23/100	Low	Apex class count, trigger count, flow complexity, code dependencies, custom fields, validation rules Score reflects 109 Apex classes, 8 triggers, and 13 flows referencing CPQ objects. Substantial custom code dependency detected.
Data Volume & Usage	15%	22/100	Low	Quote volume, line count, user adoption, discount patterns Score reflects 23 quotes all-time (0 in the 90-day window). Low volume — some metrics may not be statistically meaningful.
Technical Debt	15%	10/100	Low	Inactive price rules, stale/test rules, duplicate discount schedules, dormant products Score reflects 3 dormant products, 8 inactive price rules, 1 inactive product rules, 3 stale/test rules, 11 duplicate discount schedules. Multiple debt categories indicate cleanup opportunity.

V11 note: The following data drivers from Sections 6.8–6.9 are candidates for future scoring-model recalibration (no current scores affected): Configuration Depth — transactional object page layout and field counts, twin field density, custom record types on transactional objects; Customization Level — Summary Variables count, Search Filters count, Lookup Queries count; Pricing Logic — Special Fields usage depth, Contracted Pricing per-account depth; Technical Debt — dormant transactional objects (high layout count + low record count). V13: Custom Actions count added as recalibration candidate for Customization Level dimension.

2.4 Complexity Hotspots (Summary)

Top complexity areas identified — see Section 11 for full analysis.

Hotspot	Severity
Quote Pricing Engine	Critical
DocuSign Document Chain	High
Custom Code Dependencies	High
Bundle & Option Configuration	High
Custom Action Buttons	High

3. CPQ at a Glance

Data confidence summary: approximately 98% Confirmed, 1% Estimated, 0% Partial.

Product Catalog

Metric	Value	Conf.
Active Products	176	Confirmed
Bundle-capable Products	19 (18 with options)	Confirmed
Price Books	2	Confirmed

Bundle-capable = products with SBQQ__ConfigurationType__c set. This is a metadata capability flag, not a count of fully configured bundles with nested options.

Pricing & Rules

Metric	Value	Conf.
Price Rules (Active)	20	Confirmed
Product Rules (Active)	37	Confirmed
Discount Schedules	22	Confirmed
Custom Scripts (QCP)	5 script(s) detected (QCP not configured via settings)	Confirmed

Quoting

Metric	Value	Conf.

4. CPQ Package Settings

4.1 Installed Packages

Package	Namespace	Version	Latest Available	Status
Salesforce Billing	blng	232.3.0	244.1.0	Stale (≥2 behind)
Dunning and Collections for Salesforce Billing	SFBD	2.1.0	2.2.0	1 behind
Einstein Analytics for Salesforce CPQ	cpqea	232.0.0	244.0.0	Stale (≥2 behind)
Cancel & Replace	cpqlabs	1.3.0	1.4.0	1 behind
Conga Composer	APXTConga4	8.293.0	8.300.0	1 behind
Docusign Apps Launcher	dfsle	3.1.2	3.2.0	1 behind
DocuSign eSignature for Salesforce	dsfs	7.5.2	8.0.0	1 behind
Salesforce CPQ	SBQQ	232.2.0	244.1.0	Stale (≥2 behind)
Advanced Approvals	sbaa	232.2.0	244.1.0	Stale (≥2 behind)
DocuSign for Salesforce CPQ	SBQQDS	3.2.0	3.3.0	1 behind
Salesforce CPQ: Conga Quotes	APXTCFQ	3.4.0	3.5.0	1 behind
Avalara for Salesforce Billing	AVA_BLNG	5.0.0	5.1.0	1 behind
Avalara AvaTax Salesforce Mapper	AVA_MAPPER	1.67.0	1.70.0	1 behind
22 additional packages installed	—	—	—	—

Installed Version is extracted from the org. Latest Available Version is from an internal CPQ-relevant package reference (updated 2026-04-29). Versions for SBQQ, sbaa, and blng reflect the latest Salesforce CPQ release branch. Non-Salesforce packages (dsfs, APXTConga4, etc.) are best-effort estimates from AppExchange — verify with vendor for exact latest. "—" = no reference data available for this namespace.

4.2 Core CPQ Settings

Setting	Value	Notes	Confidence
Multi-Currency	Enabled (AUD, GBP, EUR, NZD, USD)	Multi-Currency: Enabled (AUD, GBP, EUR, NZD, USD)	Confirmed
Twin Fields	Enabled (9 fields)	Twin Fields: Enabled (9 SBQQ fields on Opportunity)	Confirmed
Quote Line Editor	Enabled	Quote Line Editor: Enabled (QLE fields detected on Quote object)	Confirmed
Contracted Pricing	Enabled	Contracted Pricing: Enabled (ContractedPrice object exists)	Confirmed
Subscription Proration	By Subscription End Date	Subscription: Enabled (Contracting: By Subscription End Date)	Confirmed
Renewal Model	Not extracted	Not extracted — SBQQ__RenewalModel__c package setting not included in current extraction scope. In RCA, both	Partial

Setting	Value	Notes	Confidence
		Contract and Asset renewal types map to Asset-based renewals.	

4.3 Plugins

Plugin	Status	Notes	Confidence
Quote Calculator Plugin (QCP)	Not Configured	Not Configured — no custom JavaScript calculation injection detected. Pricing logic uses standard Price Rules.	Confirmed
Electronic Signature	Active	Active (DocuSign) — document signing integration detected.	Confirmed
Document Store Plugin	Not Configured	Not Configured — standard document storage in use.	Confirmed
Payment Gateway	Not Configured	Not Configured — no payment processing via CPQ detected.	Confirmed
External Configurator	Not Configured	Not Configured — standard CPQ configurator in use.	Confirmed
Recommended Products Plugin	Active	Active — Apex implementation detected: ProductRecommendationPluginRevCloud	Confirmed

Plugin activation status in this table is determined from `SBQQ__CustomScript__c` inventory and Apex class interface analysis — i.e., whether custom scripts or plugin implementations exist in the org. Section 9.1b.3 shows the CPQ Plugin Slot registration status from `SBQQ__Plugin__c` settings — "unset" there means the Apex class is not wired into the CPQ plugin configuration record, even though the implementation exists. Both views are correct; they measure different things (existence vs. registration).

5. Quote Lifecycle

The following lifecycle is derived from detected configuration patterns. Step sequence and frequency are inferred from metadata and have not been verified through direct process observation.

Step	Lifecycle Stage	Detail
1	Lead / Opportunity	Lead qualified → converted to Account, Contact, Opportunity.
2	Quote Creation	Sales Rep creates Quote from Opportunity.
3	QLE Configuration	Products added, bundles configured with nested options. Product rules enforce selection and validation constraints.
4	Pricing Execution	Price rules calculate adjustments, discount schedules apply tiered discounts. Custom scripts (QCP) detected — JavaScript-based pricing logic extends standard calculation.
5	Approval Routing	Advanced Approvals (sbaa) — multi-level chains with condition-based routing.
6	Document Generation / Signature	Quote PDF generated from configured templates → DocuSign envelope created for e-signature.
7	Order Creation	Quote accepted → Order auto-created.

6. Configuration Domain Analysis

6.1 Product Catalog

Category	Active	Inactive	Quoted 90d	% Quoted	Conf.
Software	38	1	6	15%	Confirmed
Services	26	0	1	4%	Confirmed
Hardware	48	0	0	0%	Confirmed
Other	5	0	0	0% (0 of 5)	Confirmed
None	2	0	0	0% (0 of 2)	Confirmed
Professional Services	4	0	0	0% (0 of 4)	Confirmed
Bundle	8	1	0	0% (0 of 9)	Confirmed
Usage	5	0	1	20% (1 of 5)	Confirmed
Software Add-On	6	0	0	0% (0 of 6)	Confirmed
Software Licenses	2	1	0	0% (0 of 3)	Confirmed
Software Support	2	0	0	0% (0 of 2)	Confirmed
COBRA	8	0	0	0% (0 of 8)	Confirmed
HRA	1	0	0	0% (0 of 1)	Confirmed
HSA	1	0	0	0% (0 of 1)	Confirmed
FSA	3	0	0	0% (0 of 3)	Confirmed
Notional	1	0	0	0% (0 of 1)	Confirmed
Commuter	2	0	0	0% (0 of 2)	Confirmed
Subscription Device	1	0	0	0% (0 of 1)	Confirmed
Insurance	5	0	0	0% (0 of 5)	Confirmed
Commercial	2	0	1	50% (1 of 2)	Confirmed
Residential	6	0	1	17% (1 of 6)	Confirmed

% Quoted = products quoted in 90-day window ÷ active products in category.

16 of 21 product families show zero quoting activity in the 90-day window — including Hardware, Bundle, COBRA, and others. This may indicate dormant catalog segments, seasonal patterns, or a narrow active use-case.

6.2 Product Deep Dive

Product Summary (Active Only) — 176 Products

6.5 Discount Schedules

22 total schedules: 12 unique names. 'Named Users Discount Schedule' appears 11 times — flagged as duplicate in Technical Debt inventory.

Schedule Name	Status	Cross Products	Cross Orders
Named Users Discount Schedule	 Duplicate	Yes	Yes

Schedule Name	Status	Cross Products	Cross Orders
Hardware Discount Schedule	Unique	No	Yes
Tooless Cable Management	Unique	No	No
VSphere	Unique	No	No
License Discount Tiers	Unique	No	No
Terumo Arrays	Unique	No	No
Finance and Reporting User Discount Schedule	Unique	Yes	Yes
Country Discount Tiers	Unique	No	No
Discount	Unique	No	No
Engagement Fee Discount Schedule	Unique	No	No
HSA Product Unit Discount	Unique	No	No
HSA Tiered PCT Discount	Unique	No	No

Cross Products/Orders = TRUE indicates discounts calculated across multiple records — adds complexity for RCA conversion.

6.6 Bundles & Options Deep Dive

BUNDLE CONFIGURATION

Bundle-capable	19
Configured Bundles	18
Nested Bundles	3
Avg Options/Bundle	26.4

OPTION COMPLEXITY

Total Options	475
Options w/Constraints	19%
Config Attributes	0%
Config Rules	21%

Bundle-capable = products with SBQQ__ConfigurationType__c set (Required or Allowed). Configured Bundles = bundle-capable products that have at least one active SBQQ__ProductOption__c child record. The difference (1) reflects bundle-capable products with no options currently attached.

Nested Bundles = SBQQ__ProductOption__c records whose Optional SKU is itself a bundle-capable product. A nested bundle adds a layer of configuration depth — max nesting depth detected across the catalog is reported in the Bundle Configuration summary above.

6.6.1 Related Object Utilization

Observation	Not Used	Sometimes	Most Times	Always	Count / %	Notes
Features	☐	☒	☐	☐	193 / 9%	193 features across 16 bundle-capable product(s)

Custom Action Buttons threshold for hotspot flag: > 10 active actions across all panels. Salesforce Demo: 59 active.

6.7.3 Standard Approval Processes

No standard approval processes detected on CPQ objects.

6.7.4 Quote Templates

Template	Default	Last Modified
Proposal With Usage	No	Not available
Quote	No	Not available
Contract	No	Not available
Proposal	Yes	Not available

Template	Default	Last Modified
Proposal w/ Subs and One-Time Prods	No	Not available
Proposal Multilanguage	Yes	Not available

Template complexity: 53 template section(s) across all templates. 269 localization record(s) — translations add replication complexity.

6.7.5 Document Generation

Metric	Value
Quote Templates (configured)	6
Total Template Sections	53
Localization Records (translations)	269
Default Template	Proposal, Proposal Multilanguage
DocuSign Integration	Active
Conga Composer	Detected
Document Store Plugin	Standard

Document generation pipeline: native Quote Templates → Conga Composer rendering → DocuSign envelope → e-signature.

6.8 Transactional Object Assessment

Metadata analysis of the 8 transactional objects in the quote-to-cash pipeline. This section assesses page layouts, custom buttons/links, field sets, record types, validation rules, and custom fields across Opportunity through Subscription.

Object	PL	Btn/Lnk	FS	RT	VR	Custom Fields	Notes
Opportunity <i>Opportunity</i>	5	7	0	1	1	32	32 total (15 managed / 17 org-owned) Managed-heavy (>30%)
Opportunity Product <i>OpportunityLineItem</i>	3	0	0	0	0	5	5 total (4 managed / 1 org-owned) Managed-heavy (>30%)
Quote <i>SBQQ_Quote__c</i>	0	7	0	1	2	138	138 total (79 managed / 59 org-owned) Managed-heavy (>30%)
Quote Line <i>SBQQ_QuoteLine__c</i>	0	0	0	0	7	198	198 total (136 managed / 62 org-owned) Managed-heavy (>30%)
Order <i>Order</i>	4	0	0	0	1	26	26 total (19 managed / 7 org-owned) Managed-heavy (>30%)
Order Product <i>OrderItem</i>	4	0	0	0	7	114	114 total (100 managed / 14 org-owned) Managed-heavy (>30%)
Contract <i>Contract</i>	3	0	0	0	0	32	32 total (29 managed / 3 org-owned) Managed-heavy (>30%)
Subscription <i>SBQQ_Subscription__c</i>	0	0	0	0	1	77	77 total (77 managed / 0 org-owned) Managed-heavy (>30%)

PL = Page Layouts, Btn/Lnk = Buttons/Links/Actions (custom only), FS = Field Sets, RT = Active Record Types, VR = Active Validation Rules.
Complexity threshold: Page Layouts > 5 flagged.

6.8.1 Opportunity

Metric	Value	Notes
Formula fields referencing SBQQ	2	—

6.8.2 Opportunity Product

Metric	Value	Notes
Record Count	Not assessed	Record count extraction not run for this object in current scope.
Custom Fields	5	Extracted from object describe metadata.

6.8.3 Quote

Metric	Value	Notes
Record Count	Not assessed	Record count extraction not run for this object in current scope.
Custom Fields	138	Extracted from object describe metadata.

6.8.4 Quote Line

Metric	Value	Notes
Record Count	Not assessed	Record count extraction not run for this object in current scope.
Custom Fields	198	Extracted from object describe metadata.

6.8.5 Order

Metric	Value	Notes
Orders in 90-day window	0	Not observed in 90-day window
Ordered Quotes (Primary=TRUE, Ordered=TRUE)	0	Not observed in 90-day window
Avg Orders per Ordered Quote	Not observed in 90-day window	Not observed in 90-day window

6.8.6 Order Product

Metric	Value	Notes
Record Count	Not assessed	Record count extraction not run for this object in current scope.
Custom Fields	114	Extracted from object describe metadata.

6.8.7 Contract

Metric	Value	Notes
Total Contracts (evaluated population)	314	Scope: all-time contracts assessed. Classification via explicit CPQ lineage fields (SBQQ__RenewedContract__c, SBQQ__Amen...
Renewals	0	Scope: all-time contracts assessed. Classification via explicit CPQ lineage fields (SBQQ__RenewedContract__c, SBQQ__Amen...
Amendments	0	Scope: all-time contracts assessed. Classification via explicit CPQ lineage fields (SBQQ__RenewedContract__c, SBQQ__Amen...
New / Unclassified	314	Scope: all-time contracts assessed. Classification via explicit CPQ lineage fields (SBQQ__RenewedContract__c, SBQQ__Amen...
Renewal Forecast = TRUE	169	Scope: all-time contracts assessed. Classification via explicit CPQ lineage fields (SBQQ__RenewedContract__c, SBQQ__Amen...
Renewal Quoted = TRUE	42	Scope: all-time contracts assessed. Classification via explicit CPQ lineage fields (SBQQ__RenewedContract__c, SBQQ__Amen...

6.8.8 Subscription

Metric	Value	Notes
Total Subscriptions	38	All-time counts. Amended detected via SBQQ__RevisedSubscription__c. No renewal detection field found.
Amended Subscriptions	6	All-time counts. Amended detected via SBQQ__RevisedSubscription__c. No renewal detection field found.
Renewed Subscriptions	0	All-time counts. Amended detected via SBQQ__RevisedSubscription__c. No renewal detection field found.

6.9 Additional CPQ Functionality

Detection of additional CPQ capabilities beyond core configuration objects. Each capability is assessed for presence, evidence type, and migration complexity impact.

Functionality	Detected	Evidence	Count / Scope	Complexity Note	Conf.
Summary Variables	Yes	Config	30 records	Aggregate calculations across quote lines — map to RCA pricing procedures	★★★
Search Filters	Yes	Config	1 records	Product search scoping — low migration complexity	★★★
Guided Selling (Quote Processes)	Yes	Config + Usage	1 processes, 7 inputs	Guided product selection — requires RCA flow redesign	★★★
Contracted Pricing	Yes	Config + Usage	50 records	Per-account negotiated prices — maps to RCA contracted pricing	★★★
Account-Level Renewal Model Distribution	Yes	Usage	2 distinct models	Multiple renewal models in use — each maps differently to RCA	★★★
Lookup Queries & Lookup Data	Yes	Config + Derived	34 queries, 0 data records	External data in rules — requires data structure replication in RCA	★★
Account Renewal Automation	No	Config + Derived	See Section 9.2	Flows on Contract/Subscription filtered for renewal evidence	★★
Custom Actions	Yes	Config	63 actions — see Section 6.7.2	Custom CPQ buttons — see Section 6.7.2 for detail	★★★
Special Fields	Yes	Usage	11 fields populated on Quote/Quote Line	Pricing manipulation fields — adds complexity in CPQ and RCA translation	★★★
Twin Fields	Yes	Derived	11 across 5 object pairs	Cross-object field synchronization patterns requiring mapping	★★

Evidence Type: Config = metadata/config records exist; Usage = records populated in window; Derived = inferred from related metadata.

Confidence: ★★★ Confirmed / ★★ Estimated / ★ Partial.

6.9.1 Twin Field Usage (Cross-Object)

11 twin fields detected across 5 object pair(s). Detection method: API name convention matching across related object pairs. Confidence: ★★.

Object A	Object B	Count	Examples (up to 3)
SBQQ__Quote__c	Opportunity	4	ACV_1st_Year__c, Margin__c, PO_Number__c, Competitor__c
SBQQ__Quote__c	Order	2	Quick__c, PO_Number__c
SBQQ__QuoteLine__c	OpportunityLineItem	1	Revenue_Metric_Twin__c
SBQQ__QuoteLine__c	OrderItem	3	Base_SSP__c, Standalone_Selling_Total_Price__c, Revenue_Metric_Twin__c
Order	Contract	1	Status__c

Twin fields are org-owned custom fields with matching API names across related object pairs, suggesting cross-object data synchronization patterns that require mapping in RCA.

6.9.2 Special Fields Detected

Special Fields manipulate the OOB CPQ pricing model. Each adds complexity in CPQ and in the translation to RCA. Scope: Quote + Quote Line objects.

Field Name	Object	Purpose	Pop. Count	Conf.
SBQQ__MarkupRate__c	SBQQ__Quote__c	Markup rate applied to cost-based pricing	0	★★★
SBQQ__Uplift__c	SBQQ__QuoteLine__c	Uplift percentage for renewal pricing	73	★★★

Methodology: The "fields populated" count in Section 6.9 refers to all SBQQ special pricing fields (e.g., MarkupRate, Uplift, PartnerDiscount, AdditionalDiscount, etc.) that exist on Quote or Quote Line objects. This detail table shows only fields with non-zero population counts — fields that are defined but have zero populated records are omitted for clarity.

6.9.3 Lookup Queries & Lookup Data

Lookup Queries: 34 total (active/inactive split unavailable)

Names: 34 total (names not individually extracted)

No custom lookup-source objects detected in Price Rule / Product Rule configurations.

7. Usage & Adoption Analysis

⚠ **Low-volume data** — results may not be statistically meaningful.

7.1 Quoting Activity

Metric	Value	Trend	Conf.
Quotes Created (All-Time)	23	N/A	Confirmed
Quotes Created (90-Day)	0	N/A	Confirmed
Quote Lines (All-Time)	73	N/A	Confirmed
Quote Modification Rate	Not assessed — requires Field History Tracking on SBQQ__Quote__c	N/A	Not extracted
Quote Volume Trend		N/A	Confirmed

7.2 Conversion by Quote Size

Size	% Quotes	% Revenue	Conversion	Conf.
Small (<\$5K)	52%	9%	25%	Estimated
Medium (\$5K-\$25K)	35%	42%	75%	Estimated
Large (\$25K-\$100K)	9%	49%	100%	Estimated

% Quotes = quotes in segment ÷ total quotes (23). % Revenue = segment revenue ÷ total quoted revenue. Conversion = ordered quotes ÷ total quotes per segment.

7.3 Discount Distribution

Range	Count	% Discounted
0-5%	1	9%
6-10%	4	36%
11-15%	2	18%
16-20%	0	0%
>20%	4	36%

% = quote lines in range ÷ total discounted quote lines. Count = number of discounted quote lines in each range.

7.4 Manual Price Overrides

0 lines (0%) with manual overrides. Revenue impact: \$0.

7.5 User Behavior by Role

Role	Users	% Quotes	Conv %
System Administrator	1	100%	52%

7.6 Top Quoted Products

#	Product	Category	Quoted	% Quotes
1	2-Yard Dumpster	Commercial	7	30%
2	Anomaly Detection	Software	4	17%
3	Disaster Recovery	Software	4	17%
4	Distributed Search	Software	4	17%
5	Clustering	Software	3	13%
6	High Availability	Software	3	13%
7	Application Monitoring	Software	3	13%
8	Quick Start Enablement	Services	3	13%
9	Paid Data Plan	Usage	3	13%
10	96 Gallon Residential Waste & Recycling Bundle	Residential	3	13%

% = distinct quotes containing product ÷ total quotes (23)

8. Data Quality & Technical Debt

8.1 Flagged Areas

Issue	Status	Detail
Products with Blank Family	Flagged	5 products have no Product Family assigned: Ad Hoc, Fee, Credit, Free Trial, Shipping Charge Product. Consider assigning families for better categorization.
Orphaned Quote Lines	Clean	No orphaned quote lines detected. Status: clean.
Duplicate Product Codes	Flagged	4 product codes shared by multiple products (active + inactive). Status: flagged.
Inactive Products on Ordered Quotes	Clean	No inactive products on ordered quotes. Status: clean.
Invalid Picklist Values	Not Assessed	Not assessed in current scope. Requires full schema + data scan.

8.2 Technical Debt Inventory

Category	Count	Detail
Dormant Products	3	Products not quoted in the 90-day assessment window.
Inactive Price Rules	8	Price rules marked inactive. Review for cleanup.
Inactive Product Rules	1	Product rules marked inactive. Review for cleanup.
Stale/Test Rules	3	Rules with DELETE, TEST, DRAFT, or similar in name — likely cleanup candidates.
Duplicate Discount Schedules	11	1 schedule name(s) appear multiple times: "Named Users Discount Schedule" (11×).

8.3 Feature Utilization

Feature	Status	Detail
Product Bundles	Configured	19 bundle-capable products (18 with active nested options), 475 product options.
Discount Schedules	Configured	22 schedules detected.
Custom Scripts (QCP)	Active Usage	5 custom scripts detected (QCP not configured via Package Settings).
Quote Templates	Configured	6 configured templates. Usage not tracked.
Advanced Approvals	Configured	16 advanced approval rules detected.
Contracted Pricing	Configured	50 contracted prices detected.
Multi-Language	Configured	1 localizations detected.

9. Custom Code & Automation Inventory

9.1 Apex Classes Referencing SBQQ

109 Apex classes reference CPQ objects (96 non-test + 13 test classes).

Class Name	Lines	Purpose	Origin
CPQB_QuickSelectCTRL	403	Controller	Custom
InvoiceViewTests	127	Apex test class — excluded from migration metrics	Custom

CPQB_MultiCloudBillingCTRL	260	Controller	Custom
ContractRenewer	7	Contract management	Custom
QuoteValidator	6	Quote processing	Custom
RC_CPQAPICallback	5	Integration	Custom

Methodology: Custom Apex classes whose source code contains references to the SBQQ namespace, identified via Salesforce Tooling API query. Includes both production code and test classes.

9.1a Third-Party (Managed Package) Apex Classes

1571 managed-package Apex classes across 15 installed vendor package(s). These do not migrate via Apex rewrite — each vendor requires a separate migration plan.

Managed Package Namespace	Class Count	Total Lines
adnblng	9	0
APXTCFQ	251	0
APXTConga4	265	0
AVA_BLNG	67	0
AVA_MAPPER	166	0
cpqea	38	0
cpqlabs	60	0
csblng	12	0
csfb	116	0

Managed Package Namespace	Class Count	Total Lines
dfsle	337	0
dsfs	209	0
pyzblng	10	0
qbranch	7	0
SBQQDS	18	0
SFBD	6	0

9.1b Active CPQ Plugins & Custom Scripts

Everything below is extracted automatically from the tenant's Apex + CPQ plugin settings. Classes listed as "unset" exist in the org's codebase but are NOT wired into the CPQ plugin configuration — they will not run at quote time unless the tenant updates SBQQ__Plugin__c.

9.1b.1 Apex Classes Implementing CPQ Plugin Interfaces

Class Name	Interface(s)	Lines	Registration
CPQB_QuickKeyCallback	SBQQ.CalculateCallback	5	unset
CPQB_QuickSelectCallback	SBQQ.CalculateCallback	5	unset
DemoDocumentStorePlugin	SBQQ.DocumentStorePlugin, SBQQ.DocumentStorePlugin2	40	unset
DemoPageSecurityPlugin	SBQQ.PageSecurityPlugin, SBQQ.PageSecurityPlugin2	45	unset
ExampleProductSearchPlugin	SBQQ.ProductSearchPlugin	298	unset
PluginDemoProductSearchPlugin	SBQQ.ProductSearchPlugin	98	unset
ProductRecommendationPluginRevCloud	SBQQ.ProductRecommendationPlugin	34	unset
Q2CDocumentStorePlugin	SBQQ.DocumentStorePlugin, SBQQ.DocumentStorePlugin2	40	unset
Q2CLegacyPageSecurityPlugin	SBQQ.PageSecurityPlugin2	23	unset
Q2CLegacyqcp	SBQQ.QuoteCalculatorPlugin, SBQQ.QuoteCalculatorPlugin2	139	unset
Q2CProductSearchPlugin	SBQQ.ProductSearchPlugin	98	unset
QTC_CancelContractCallback	SBQQ.CalculateCallback	9	unset
RC_CPQAPICallback	SBQQ.CalculateCallback	5	unset
TemplateQuoteCalculator	SBQQ.QuoteCalculatorPlugin, SBQQ.QuoteCalculatorPlugin2	27	unset

9.1b.2 Quote Calculator Plugin (QCP) Custom Scripts

Script Name	Lines
Q2CBundleSpecific	27

Script Name	Lines
q2cJSPSP	37
q2cJSPSP5ALEX	31
q2cJSQCP	63
qtc_Debugger	108

9.1b.3 CPQ Plugin Slot Activation

One row per CPQ plugin slot. "unset" = tenant uses the standard CPQ implementation; "active" = tenant has registered a custom Apex class.

Plugin Slot	Interface	Status
Approval Chain Custom Condition	sbaa.ApprovalChainCustomCondition	unset
Configurator Plugin (Apex)	SBQQ.ConfiguratorPluginInterface	unset
Product Search Plugin (Apex)	SBQQ.ProductSearchPluginInterface	unset
Quote Calculator Plugin (Apex)	SBQQ.QuoteCalculatorPluginInterface	unset
Quote Calculator Plugin (JavaScript)	SBQQ.QuoteCalculatorPluginInterface	unset
Quote Line Group Splitter Plugin (Apex)	SBQQ.QuoteLineGroupSplitterPluginInterface	unset

9.2 Triggers & Flows

44 active flows (13 CPQ-related, 31 additional active flows in org). 44 active flows shown. Total flows in org (including inactive and managed package flows) may be higher.

Component	Type	Object	Status
TemplateOpportunityAfter	Trigger	Opportunity	Active
CdemoProductAfter	Trigger	Product2	Active
CdemoProductBefore	Trigger	Product2	Active
Billing_Automation_v2_0	Trigger	OrderItem	Active
transactionalJournalEntriesOnInvoice	Trigger	blng__Invoice__c	Active
InvoiceTriggerGenBilling	Trigger	blng__Invoice__c	Active
beforeConsumptionSchedule	Trigger	ConsumptionSchedule	Active
TemplateQuoteBefore	Trigger	SBQQ__Quote__c	Active
Spring_2021_Subflow_Activate_Order	Flow	Not extracted — flow object binding not available from current metadata read	Active
Spring_2021_Subflow_Cart_To_Order	Flow	Not extracted — flow object binding not available from current metadata read	Active

Component	Type	Object	Status
Spring_2021_Subflow_Order_Confirmation	Flow	Not extracted — flow object binding not available from current metadata read	Active
sfdc_Checkout_Notify_On_Order_Summary_Created_Event	Flow	Not extracted — flow object binding not available from current metadata read	Active
sfdc_Checkout_Order_Summary_Notification_Flow	Flow	Not extracted — flow object binding not available from current metadata read	Active
B2B_Create_Quote_Request	Flow	Not extracted — flow object binding not available from current metadata read	Active
Matching_ID_Usage_Summary_Order_Product_Number	Flow	Not extracted — flow object binding not available from current metadata read	Active
SSP_Carve_Out_on_Order_Product	Flow	Not extracted — flow object binding not available from current metadata read	Active
Quote_Line_Group_Create_Edit_Process	Flow	Not extracted — flow object binding not available from current metadata read	Active
Order_Product_Create_Process	Flow	Not extracted — flow object binding not available from current metadata read	Active
Quote_Settings_On_Amendment_and_Renewal	Flow	Not extracted — flow object binding not available from current metadata read	Active
Distributor_And_Reseller_Quote_Create	Flow	Not extracted — flow object binding not available from current metadata read	Active
31 additional active flows (non-CPQ)	Flow (31 active flows not directly related to CPQ objects. Total	Not extracted — flow object binding not available from current metadata read	Active

Component	Type	Object	Status
	org flows: 43.)		

9.3 Validation Rules

25 validation rules across 7 CPQ-related objects (Product2, SBQQ__Quote__c, SBQQ__QuoteLine__c, SBQQ__QuoteLineGroup__c, Opportunity, Order, OrderItem).

Object	Rule	Status	Complexity
Product2	Include_or_Exclude_Maintenance	Active	low
Product2	RecurringChargeTypeMustHaveBillingType	Active	low
Product2	Term_schedule_requires_subscription	Active	low
Product2	Validate_billing_frequency	Active	low
Product2	Validate_billing_type	Active	low
SBQQ__Quote__c	End_Date_Before_Start_Date	Active	low
SBQQ__Quote__c	Invalid_First_Segment_Term_End_Date	Active	low
SBQQ__Quote__c	Invalid_Subscription_Term	Active	low
SBQQ__QuoteLine__c	Additional_discount_percent_or_amount	Active	low
SBQQ__QuoteLine__c	Dynamic_Invoicing_Amendment	Active	low
SBQQ__QuoteLine__c	Invalid_Subscription_Term	Active	low
SBQQ__QuoteLine__c	Markup_percent_or_amount	Active	low
SBQQ__QuoteLine__c	RecurringChargeTypeMustHaveBillingType	Active	low
SBQQ__QuoteLine__c	Validate_billing_frequency	Active	low
SBQQ__QuoteLine__c	Validate_billing_type	Active	low
SBQQ__QuoteLineGroup__c	Invalid_Subscription_Term	Active	low
Opportunity	Cannot_move_forward_without_PO_Number	Active	low
Order	Cannot_Contract_New_Order	Active	low
OrderItem	BillingRuleMustBeSelected	Active	low
OrderItem	CannotChangeBookingIndicatorOnActivation	Active	low
OrderItem	RecurringChargeTypeMustHaveBillingType	Active	low
OrderItem	RevenueRecognitionRuleMustBeSelected	Active	low
OrderItem	TaxRuleMustBeSelected	Active	low
OrderItem	Validate_billing_frequency	Active	low
OrderItem	Validate_billing_type	Active	low

9.4 CPQ Permission Sets

Permission Set	Type	Namespace	Assigned Users
Salesforce CPQ User	Custom	SBQQ	7
Advanced Approvals Admin	Custom	sbaa	11
Salesforce CPQ Admin	Custom	SBQQ	15
Customer CPQ License	Custom		7
Partner CPQ License	Custom		5
Salesforce CPQ Partner User	Custom	SBQQ	10
Salesforce CPQ Customer User	Custom	SBQQ	11
Advanced Approvals User	Custom	sbaa	6

Docusign CPQB Gen	Custom		177
CPQB Admin	Custom		55
Docusign_CPQB_Gen2	Custom		22
Salesforce CPQ Cancel and Replace	Custom	cpqlabs	168
Conga Quote Generation for Salesforce CPQ	Custom	APXTCFQ	108
Salesforce CPQ Customer User Access	Custom	SBQQ	0
Salesforce CPQ User Access	Custom	SBQQ	0

10. Related Functionality Analysis

10.1 Related Functionality Detection

Functionality	Not Used	Used	Notes
Experience Cloud	☐	☒	Community package installed, 35 community component(s) detected (Aura bundles + email templates with 'community' in name)
Salesforce Billing	☐	☒	Salesforce Billing (blng) package detected in installed packages
Named Credentials	☐	☒	1 detected
Platform Events	☐	☒	46 platform event channel(s) detected
Apex Callouts	☒	☐	
Tax Calculator	☒	☐	Not detected

Observations

Community presence detected — adding complexity to the CPQ environment

Salesforce Billing active — invoice handling is part of the quote-to-cash flow

External dependencies detected — integration points require assessment

W2-9 Note: Experience Cloud detection is at the component level (LWC/Aura/VF components). Site-level status (Live vs Down) and site count were not assessed in the current extraction scope. If site-level detail is needed, query the Network object with an admin profile that has "Manage Experiences" permission.

Platform Events: count is sourced from PlatformEventChannel Tooling API query and includes all event channels (org-owned and managed package). Namespace filtering was not applied — the count reflects total platform event infrastructure.

11. Complexity Hotspots

Hotspot	Severity	Analysis
Quote Pricing Engine	Critical	20 active Price Rules + 37 active Product Rules + 22 Discount Schedules + 5 Custom Scripts (QCP) form a multi-layered calculation chain.
DocuSign Document Chain	High	Quote PDF generation → DocuSign envelope → signing → Order creation spans CPQ, document generation, and e-signature.
Custom Code Dependencies	High	109 Apex classes + 8 triggers reference CPQ objects. Code review required for full assessment.
Bundle & Option Configuration	High	19 bundle-capable products (18 with active nested options) and 475 product options, enforced by Selection, Validation, Filter, and Alert product rules. Nested bundle configurations increase quote calculation complexity and UI surface area.
Custom Action Buttons	High	63 custom action buttons configured across Quote, Line, Group, Configurator, and other panels — indicating UX-layer customization beyond core configuration that adds migration complexity.

Appendix A: Configuration Object Inventory

A.1 CPQ Configuration Objects

ID	Object(s)	API Name	Count	Complexity	Conf.
1	SBQQ__ProductOption__c	SBQQ__ProductOption__c	1220	low	Confirmed

35	TaxCalculator	TaxCalculator	1	low	Confirmed

A.3 Transactional Record Counts

Raw record counts per transactional object. 90-day window matches the assessment period used in the report body.

Object	Total Record Count	90-Day Window Count
Opportunity Opportunity	Not assessed	Not assessed
Opportunity Product OpportunityLineItem	Not assessed	Not assessed

Object	Total Record Count	90-Day Window Count
Quote SBQQ__Quote__c	23	0
Quote Line SBQQ__QuoteLine__c	73	0
Order Order	Not assessed	Not assessed
Order Product OrderItem	Not assessed	Not assessed
Contract Contract	Not assessed	Not assessed
Subscription SBQQ__Subscription__c	38	Not assessed

Definition: Total Record Count = all-time record count regardless of status (COUNT query with no date filter). 90-Day Window Count = records with CreatedDate within the assessment period (same window used in Section 7.1 Quoting Activity). "Not assessed" = extraction did not include a COUNT query for this object in the current scope — Opportunity, OpportunityLineItem, Order, OrderItem, and Contract counts require additional SOQL queries not included in the default extraction profile. Subscription total is from SBQQ__Subscription__c metadata; 90-day window count was not queried. Counts are raw, not deduped by parent or filtered by status.

Appendix B: CPQ Reports & Dashboards

84 CPQ reports detected. 1 run in the last 12 months. 70 not run in over 2 years — potential reporting technical debt.

Appendix C: Glossary

Term	Definition
CPQ	Configure, Price, Quote — Salesforce quoting application (SBQQ)
SBQQ	Namespace prefix for CPQ managed package objects
sbaa	Advanced Approvals managed package
QCP	Quote Calculator Plugin — JavaScript custom calculation injection

Appendix D: Extraction Coverage

Category	Coverage	Notes
Product Catalog	Full	Products, bundles, 475 options, 38 product rules.
Pricing & Rules	Full	Price rules, discount schedules, custom scripts. Price rule usage frequency: Not extracted — requires rule-to-quote linkage data.
Transactional Data	Partial	90-day quotes, quote lines, usage trends. Quote modification history and field-level change tracking not extracted.
Custom Fields & Validation	Full	Custom fields, validation rules, formulas.
Custom Code	Full	Apex classes, triggers, flows. Apex class → SBQQ object dependencies: Not extracted — requires code-level analysis.
Quote Templates	Full	Template structure, sections, content.
Advanced Approvals	Partial	Approval rules, conditions, chains, custom actions extracted. Approval-to-quote usage linkage not surfaced.
CPQ Package Settings	Full	Custom settings, plugin configuration.
Integrations	Full	Named credentials, platform events.
Order Lifecycle	Full	Orders, contracts, subscriptions.
Localization	Full	Multi-language translations, custom labels.
User Behavior	Partial	Derived from audit trail sampling. Full user session analysis and adoption scoring not extracted.
Product Rule Complexity	Not extracted	Product rule structural complexity: Not extracted — requires condition/action scope analysis beyond current metadata extraction.
